College After Covid

A project by GeekyIgniters

Introduction

Overview of the project

We are working on the college management system once our college reopens after COVID pandemic.
In this , we will make a portal for the students and the staff of the college.
In the student portal , they can update their vaccination status,
the number of rooms vacant and can also communicate their date of arrival.
On the admin side they can update the sanitation status of the hostels,
check the number of students and the staff vaccinated,
can accept or reject the arrival request of the students arriving at the campus.

The Problem

What we want to solve

When the colleges will reopen, then this can be used to track the number of hostel sanitised, to view the number of students arrived. Keeping in view the safety of the students and staff this can be used.

Objectives

What we want to achieve

Ensure everyone's safety inside the college.

To track the number of hostels sanitized!!

Significance of the Project

In terms of scope

This will be very helpful for the wellness and the safety of the college .

Some Glimpses of Project
